Monitor & Control

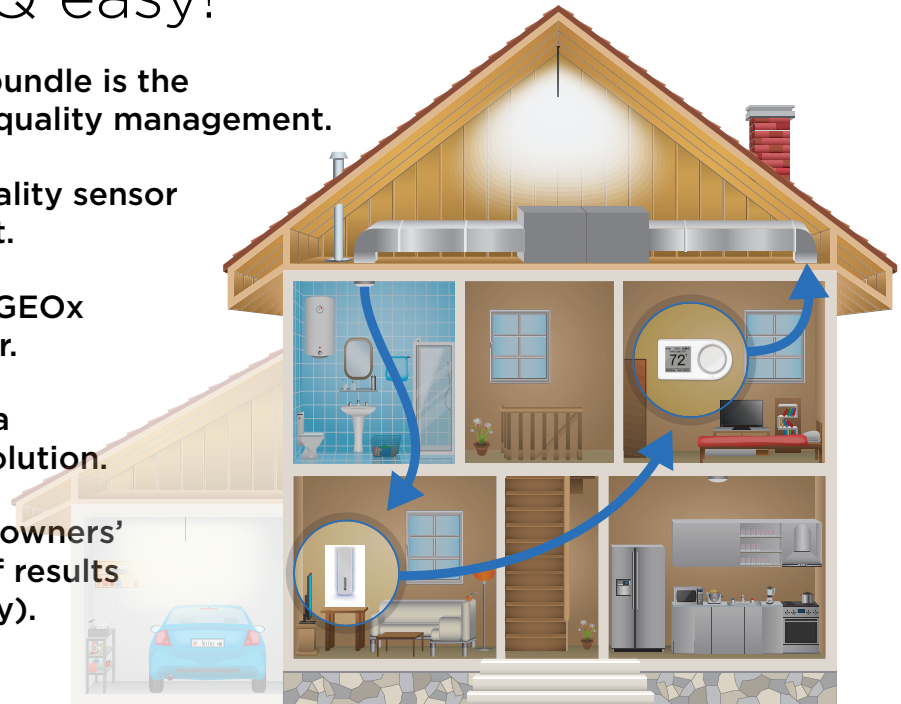

The flexible solution for managing indoor air quality.

LUXProProducts.com

We're making IAQ easy!

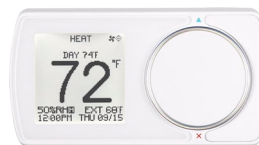

1. airSMART Monitor & Control bundle is the flexible solution to indoor air quality management.
2. Bundle includes foobot air quality sensor & LUX GEOx smart thermostat.
3. The foobot communicates to GEOx for an automatically system air.
4. Pair with a UV light to create a complete IAQ management solution.
5. Smart technology gives homeowners' peace of mind and visibility of results (iOS or android device friendly).

Monitor & Control Bundle

Inside Foobot are a number of sensors that measure carbon dioxide, volatile organic compounds and particulate matter. When Foobot detects a bad air quality "event" the unit will visibly glow from blue to orange and will automatically communicate to the LUX GEOx thermostat to circulate air.

GEOx is the smart thermostat that will automatically switch to circulation mode when the Foobot sensor communicates a bad air "event" has happened. GEOx also works with a convenient app to control comfort as well as humidification/de-humidification.
